PRACTICAL WORKSHOP: THE FASSIER-DUVAL TELESCOPIC INTRAMEDULLARY SYSTEM

The Fassier-Duval Telescopic Intramedullary System is a new rod designed for patients suffering from Osteogenesis Imperfecta (OI), skeletal dysplasia and other bone deformities. Created to prevent or stabilize fractures, or correct deformity of the long bones whilst grown occurs. It is indicated for children 18 month and older suffering from OI, pseudo-arthritis and can also be used concomitantly with external fixators in older children or short statured adults with limb length discrepancy. So far, The Fassier-Duval rod has been designed for the femur, tibia and humerus. Our practice workshop will focus strongly on practical skills, ensuring you acquire the necessary knowledge to further your career.
